1. **[CO2] Demonstrate** the equivalent RISC-V code of the following code, where the base address of C and D is in x8 and x9, i, j and m are in x18, x19 and x20. Note: You cannot use mul/div functions.

[9 marks]

```
i=1;
while ( C[i] > m ) {
    if(C[i] == D[j]) {
        C[i] = D[j] / 32;
    }
    else {
        D[j] = C[i] * 16;
    }
    i++;
}
```

C = x8
D = x9

i = x18
j = x19
m = x20

2. **[CO2] Determine** the type of Instruction and the equivalent machine code of the following MIPS instruction.

[6 marks] *RISC-V*

srli x7, x21, 6
addi x9, x29, -9
sd x8, 56(x22)

Note: Use the following information for the necessary fields:
