Department of Computer Science and Engineering

Course Code: CSE 370	Credits: 3.0
Course Name: Database Systems	

Lab 03

SQL Subqueries & Aggregate Functions

I. Topic Overview:

In this lab, the students will explore several SQL queries to get acquainted with some advanced SQL features including advanced Select queries, Subqueries & Aggregate functions. Some query-related problems will also be explored to understand how these queries work.

II. Lesson Fit:

This whole lab is a continuation of Lab 02. This lab requires the database folder generated & backed up in the previous lab.

III. Learning Outcome:

After this lecture, the students will be able to:

- a. Use Aggregate functions, Group by, Having & Order by clauses in SQL queries
- b. Retrieve data using Subqueries /nested queries.
- c. Learn about correlated Subqueries.

IV. Anticipated Challenges and Possible Solutions

a. Student may not understand the relation or difference between where clause & having clause.

Solutions:

Lab instructor will discuss the relation & contrast between where clause & having clause in the lab.

V. Acceptance and Evaluation

Students will show progress as they execute each query successfully in the command window. As this is a practice-and-learn-type lab. Students won't be evaluated in this lab.

VI. Activity Detail

a. Hour: 1

Discussion: Give a brief overview of the related queries as well as their syntaxes with some examples stated in the activity list section. The SQL clauses to be covered are – different aggregate functions (count, max, min etc.), group by, having & order by. Explain the mechanism of how Subqueries & correlated Subqueries work with the examples stated in the activity list.

b. **Hour: 2**

Problem Task: Students will complete all Tasks in activity list. They will ask the instructor in case of any issues.

c. Hour: 3

Discussion: Instructor will discuss all the tasks again to ensure that students have understood and executed all instructions accurately

Home Task: Complete all remaining tasks in case students couldn't finish within 3 hours.

Lab 03 Activity List

- All commands are shown in the red boxes.
- In the green box write the appropriate query/answer.
- All new queries should be typed in command window after mysql>
- Start by connecting to server using: mysql -u root -p[password:root]
- For more MySQL queries, go to <u>www.w3schools.com/sql</u> or google it!

We will use the same data as Lab 02. So if you have it with you, simply copy the folder to udrive>data. Then go to command window, login and use dbname. If you don't have it with you, you can borrow it from a friend! The below table is the database state after completing lab 02.

Std_ID	Name	Major	Days_present	Project_marks	CGPA	Sub_date
s001	Abir	CS	10	18.5	3.91	2018-09-15
s002	Nafis	CS	12	20	3.86	2018-08-15
s003	Tasneem	CS	8	18	3.57	2018-09-18
s005	Arafat	CSE	11	20	4.0	2018-09-13
s006	Tasneem	CSE	12	17.5	3.7	2018-08-15
s007	Muhtadi	ECE	10	19	3.67	2018-09-16

Task 1: Aggregate Functions, Group By and Having:

Retrieve the minimum CGPA/Project_marks from the table

Select min(*CGPA*) from *Lab_Grades*;

Retrieve the total number of students and the average projects marks

Select count(*) as **total_students**, avg(**Project_marks**) as **average_project_marks** from **Lab_Grades**;

Find the sum of the number of days present.

Select sum(Days_Present) from Lab_Grades;

How will you retrieve the last submission date?

Find Minimum and Maximum CGPA/Project_marks of each major

Select *major*, min(*CGPA*) as *minCGPA*, max(*CGPA*) as *maxCGPA* from *Lab_Grades* group by *major*;

Retrieve total number of students for each major

Select *major*, count(*) from *Lab_Grades* group by *major*;

utput?
Select <i>major</i> , min(<i>CGPA</i>) as <i>minCGPA</i> , max(<i>CGPA</i>) as <i>maxCGP</i> from <i>Lab_Grades</i> group by <i>major</i> having count(*)>=2;
Select <i>major</i> , min(<i>CGPA</i>) as <i>minCGPA</i> , max(<i>CGPA</i>) as <i>maxCGP</i> from <i>Lab_Grades</i> where <i>sub_date</i> <='2018-09-15' group by <i>major</i> ;
re used to specify a condition when selecting rows. What is
ne name of students who got the highest project marks. Try rect" response according to the table?
Select <i>Name</i> from <i>Lab_Grades</i> where <i>Project_marks=</i> (Select max(<i>Project_marks</i>) from <i>Lab_Grades</i>);
Select <i>Major</i> , <i>Name</i> , <i>Days_present</i> from <i>Lab_Grades</i> where (<i>Major</i> , <i>Days_present</i>) in (Select <i>Major</i> , min(<i>Days_present</i>) from <i>Lab_Grades</i> group by <i>Major</i>);

Retrieve the CSE students whose CGPA/Project_marks is higher than at least 1 CS students

Select * from *Lab_Grades* where *Major* = 'CSE' and *CGPA*>any (Select *CGPA* from *Lab_Grades* where *Major* = 'CS');

Retrieve the CSE students whose CGPA/Project_marks is higher than all CS students

Select * from *Lab_Grades* where *Major* = 'CSE' and *CGPA*>all (Select *CGPA* from *Lab_Grades* where *Major* = 'CS');

- Did you understand the role of "any" and "all" in the above queries? Explain below.
- Retrieve the name of the students who have received marks greater than at least 1 student doing the same major as them. [Hint: see next command]

Task 3: Correlated Subqueries and Exists:

Select those majors for which at least 1 student has CGPA lower than 3.7/project marks < 18

Select distinct *Major* from *Lab_Grades L1* where exists (Select * from *Lab_Grades L2* where *L2.Major=L1.Major* and *L2.CGPA<3.7*);

 L1 and L2 are temporary aliases and create two separate instances for Lab_grades, why are they required?

Retrieve the name of student who has obtained maximum marks in project using exists

Select *Name* from *Lab_Grades L1* where not exists (Select * from *Lab_Grades L2* where *L2.Std_ID!=L1.Std_ID* and *L2.Project_marks>L1.Project_marks)*;

Retrieve the name of student who has obtained maximum marks in project and who is unique using exists

Select *Name* from *Lab_Grades L1* where not exists (Select * from *Lab_Grades L2* where *L2.Std_ID!=L1.Std_ID* and *L2.Project_marks>=L1.Project_marks)*;

 Please identify the different student got highest and the 	nce between the above two queries. [Hint: 1 a e other doesn't]	isks for unique-only 1
Retrieve the total number of stud a few ways for this one is shown I	ents who obtained the maximum marks. There are pelow	e many ways of achieving one task,
Select Count(*) from Lab_Gro and L2.Project_marks>L1.Pro	ndes L1 where not exists (Select * from Lab_Grade ject_marks);	s L2 where L2.Std_ID!=L1.Std_ID
Select Count(*) from Lab_Gro	des whereProject_marks = (Select max(Project_n	narks) from Lab_Grades);
Select Count(*) from <i>Lab_Gro</i>	des where Project_marks > all (Select Project_ma	rks from Lab_Grades);
Retrieve the major which has the high number of students enrolled.	Select <i>Major</i> from <i>Lab_Grades</i> all (Select Count(*) from <i>Lab_G</i>	group by <i>Major</i> having Count(*) > Frades group by <i>Major</i>);
 The statement below is th keywords (marked in blue) 	e general format for a "Select" statement. Statement are used for. SELECT column_name(s) FROM table_name(s)	te what each of the
WHERE conditions GROUP BY column_name(s)		
	HAVING conditions	
	ORDER BY column_name(s);	
	ONDER BY Column_name(3),	

•	Write down the general form	at for "Insert", "Delete"	and "Update" statements.	
Г				

Task 4: Take a Quiz

Go to https://sqlzoo.net/wiki/Nested_SELECT_Quiz to test your understanding of the queries taught in class.
